PROJECTS

1. **Employee Timing System** : Created an employee logging system where any company can manage their employee's timing by punch in, punch out system where upon registration of employee, an id card of employee will be generated and an web page is available for all the company where the page will access the web cam or mobile cam, can will scan the QR code on employee's id card and punch in or punch out will be marked automatically.
2. **Moneyplant Fintech** : I have solely worked on the Moneyplant Fintech, a company's project where the client, runs facebook ads for their landing pages and the data for the facebook ads would be fetched directly using cron job and this data is then filter out and send to lending partner like Bajaj, Axis, LandingKart, etc. Also there is panel available for affiliate marketer who can punch leads thorough their panel.
3. **HMe Gifting Shop** : Have worked on this project as a freelancer where the client's requirement was to provide a web panel where he can add products(with mask for customisation), category, etc and there would be a mobile app for user where the user can order products by customising the product by adding their own images upon the masks.
4. **PHP Packages** : Have created some packages in PHP like Custom ORM, Mailing, JWT.
